## Education

### B.Tech, Computer Science

Jaipur National University  
2024 to 2028, CGPA 8.0

### Senior Secondary (Class 12)

Sheonedi Sao College, BSEB  
2020 to 2022, 77.8%

## Skills

### Python

NumPy, Pandas, Scikit-learn

### Machine Learning

LightGBM, XGBoost, SHAP, Regression

### Data Analysis and EDA

Statistical Modeling, SQL

### Visualization

Matplotlib, Seaborn, Plotly

## Language

English  
Hindi

## About Me

B.Tech CSE student focused on data science and machine learning. I build projects from raw data to a working app: the model, an API, tests and a live demo. I am looking for a data science or ML role where I can work on real problems and learn from a team.

## Experience

### Data Science Project Implementation Specialist

**YuvaIntern** 15 Aug 2026 to 26 Sep 2026, 6 weeks

- Took a data science project from plan to implementation in Python over 6 weeks.
- Completed 100% of the programme tasks and finished with an overall score of 82/100.

### Data Science Project Coordinator

**YuvaIntern** 5 Jun 2026 to 10 Jul 2026, 5 weeks

- Planned a data science project from scratch: scope, objectives, phases, milestones and deliverables.
- Built the timeline with a Gantt chart, plus a resource plan and a risk plan.
- Completed all 5 weekly tasks and finished with an overall score of 92/100.

## Projects

### Citewell *Python, FAISS, sentence-transformers, Streamlit, Groq*

- Question answering for contracts and financial reports. Every answer points to the exact clause, table or page, and says so when the documents do not have the answer.
- Tested on 23 questions I labelled myself: MRR 0.92, Recall@2 of 1.0, faithfulness 4.8 out of 5.

### ChurnScope *Python, LightGBM, SHAP, FastAPI, Docker*

- Predicts which telecom customers may leave, using 7,043 customers: ROC-AUC 0.856 and 74% recall.
- Explains each prediction with SHAP and serves the model through FastAPI, with a Streamlit dashboard and Docker setup.

### LiftLab *Python, SciPy, statsmodels, Plotly, Streamlit*

- A/B test dashboard that checks the data for sample ratio mismatch, then compares results with frequentist and Bayesian methods.
- Includes sample size planning and day-by-day monitoring, with 59 automated tests.

### Triavia *Python, FastAPI, scikit-learn, Streamlit*

- Emergency triage tool that turns vital signs into one of four urgency levels with the reasons. Safety rules can raise a result but never lower it.
- 126 automated tests. About 93% accuracy on synthetic data, so it is a demo and not a medical tool.
